--- TISSUE SPECIFICITY: Testis and brain specific. In some patients suffering from cancers, it is also specifically expressed by the parameoplastic tumor cells.
--- MISCELLANEOUS: Antibodies against PNWA1 are present in sera from patients suffering of parameoplastic neurological disorders.
--- SIMILARITY: Belongs to the PNWA family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Poustka A., Wellenreuther R., Mewes H.-W., Weil B., Wiemann S.;

WHILLARITY: Belongs to the intermediate filament family. THIS IS A
B TYPE LAMIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PLAYS A ROLE IN REGULATING LAMIN ASSOCIATIONS.
MISCELLANBOUS: The structural integrity of the lamina is strictly controlled by the cell cycle, as seen by the disintegration and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     -i- FUNCTION: Laming are components of the nuclear lamina, a fibrous layer on the nucleoplasmic side of the inner nuclear membrane, which is thought to provide a framework for the nuclear envelope
                                                                                                                                                 Isold=P21619-1; Sequence=External;
Note=No experimental confirmation available;
TISSUE SPECIFICITY: Germ cell specific.
PTM: B-TYPE LAMINS UNDERGO A SERIES OF MODIFICATIONS, SUCH AS FARNESYLATION AND PHOSPHORYLATION. INCREASED PHOSPHORYLATION OF THE LAMINS OCCURS BEFORE ENVELOPE DISINTEGRATION AND PROBABLY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               "CDNA cloning of a germ cell specific lamin B3 from mouse spermatocytes and analysis of its function by ectopic expression in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PIR; S28419; S28419.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   and mouse CDNA sequences.";

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

-!- FUNCTION: Mediates caspase-dependent apoptosis.

-!- SUBUNIT: Homodimer. Blands BAX, BCL2 and BCLX (By similarity).

-!- DOMAIN: The BH3-like domain is required for association with BAX and for mediating apoptosis. The three BH domains (BH1, BH2, and BH3) of BAX are all required for mediating protein-protein interaction (By similarity).

-!- SIMILARITY: Belongs to the PNMA family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       18;

J. Biol. Chem. 275:21385-21395 (2000).

-- SUBUNIT: Probably associates with an alpha chain.

-- SUBCELLULAR LOCATION: Cytoplasmic. Detected prominently in the outer segments of photoreceptor rods and cones and in the basolateral membrane and cytosol of gastric epithelial cells.

-- IISSUE SPECIFICITY: Expressed at very low levels in many tissues, with strongest expression in cerebellum, spinal cord, stomach, pituitary gland, liver, pancreas, salivary gland, kidney, bladder,

Science 286.1571-1577(1999).
-!- FUNCTION: This protein is essential for replication of the chromosome. It is also involved in DNA recombination and repair (By similarity).
-!- SUBUNIT: Homodimer (By similarity).
-!- SIMILARITY: Contains 2 SSB domains.
-!- CAUTION: Ref. 3 sequence differs from that shown due to two frameshifts in positions 93 and 169.
                                                                                                                                                                                                                                                                              -RSAEKWSSGRS-GRKRNASVERRSAASSSRRSR-----SGGRRRKSCFGAS 547
